

HANIFAN HAQIN

Software Developer

Phone: +6289674616924 | Email: hanifanhaq@gmail.com | Portfolio: www.ifanhaq.web.id

SUMMARY

An aspiring backend developer with a solid foundation in backend technologies and a knack for problem-solving. Possesses leadership potential and a strong willingness to learn. Looking to grow and contribute to impactful projects in software development.

EDUCATION

POLITEKNIK NEGERI INDRAMAYU

D4 Rekayasa Perangkat Lunak (8TH Semester)

Thesis: DEVELOPMENT OF A RETRIEVAL-AUGMENTED GENERATION SYSTEM FOR EDUCATIONAL VIDEOS ON ACUTE CORONARY SYNDROME

SKILLS

- Programming Language: Java, Javascript, Typescript, PHP, SQL, Python.
- Backend Development: Spring Boot, Laravel, Node JS, Express JS, FastAPI.
- Database: MySQL, SQLite, PostgreSQL, Prisma ORM.
- Frontend Development: React JS.
- Mobile App Development: React Native, Flutter.

ACHIEVEMENTS

- Finalist of 2024 KMIPN V in E-Government category.
- Bronze medalist of 2023 NPEO X in Writing category.

PROJECTS & EXPERIENCES

Internship (Bamboo System Technology)

Software Engineer (October 2025 – January 2026)

Designing and Testing an AI-Based Learning Management System Platform. Utilizing the core features on the platform to create a comprehensive AI-Based courses such as English course, Chinese course, Physics course, Applied Skills course and many more.

Internship (PT ASYX Indonesia)

Software Developer (June 2025 – November 2025)

Working on Financial Supply Chain Management (FSCM) project(s) as a Full-stack Developer. Utilizing Java Spring Boot and React JS as the technology to develop and maintain microservice projects.

SKALearn (Final Thesis)

Developing a video-based learning system in a case of Acute Coronary Syndrome for Nursing Student. Utilizing Retrieval Augmented Generation (RAG) to ensure the quality of LLM's response based on knowledge bases so it does not hallucinate and keeps providing a valid learning material.

Mobile Apps E-Forensics Arwana Fish (Ministry and Fisheries of Indonesia)

Mobile Apps Developer (October 2024 – December 2024)

- Created an early version of the app and the logic in it using React Native Technology.
- Slicing Figma design using Typescript React (TSX) with React Native StyleSheet.
- Developed a self-contained database with SQLite.
- Developed a print-to-file feature into a PDF file using expo-print APIs.

PetaniTech Web & Mobile Apps (Internal Campus Research Project)

Project Manager, Fullstack Developer, Mobile Developer, Machine Learning Engineer (September 2024 - January 2025)

- Slicing Figma designs from both web apps design and mobile design using Laravel Blade, Bootstrap 5, and React Native StyleSheet.
- Created a microservice for streaming data from an IoT sensors with NodeJS.
- Developed an API for CRUD operations that manage farmers' data using Laravel.
- Helped a colleague developed a model for rice planting season prediction.
- Developed an API for a machine learning model using Express JS and TensorJS.
- Integrated both web apps and mobile apps to connect to the APIs that had been developed before.
- Lead a project team where the project only had a limited amount of time to complete all the works on time.

POLINDRA TOEFL TEST PREDICTION Web Apps (Project-based Learning Subject)

Fullstack Developer (February 2024 – May 2024)

- Collaborated project with UPA BAHASA in Politeknik Negeri Indramayu.
- Slicing Figma design using Laravel Blade, Bootstrap 5, and JQuery.
- Developed multi-role authentication with Laravel for test takers and admin.

- Created a test questions upload mechanism directly from Excel file to the website's database using PHPSpreadsheet library.

PORTALGANK Web App (KMIPN 2024 E-Government Category's Final)
Fullstack Developer, Project Manager (May 2024 - June 2024)

- Slicing Figma design using Laravel Blade, Bootstrap 5, and JQuery.
- Developed multi-role authentication with Laravel 10.
- Developed a CRUD System with Laravel 10.
